CBR Continues its Campaign to Convince the Public that a Preborn Baby Really is a Baby

In October 2026, CBR Executive Director Gregg Cunningham was invited to present embryonic and fetal endoscopic video material to nearly 500 banquet guests at a fundraising gala held by and for the New Life Care Center in Jasper, Georgia, outside Atlanta.

New Life Care Center is a pregnancy resource medical clinic founded and directed by a wonderfully dynamic lady named Pat Page. From January to August 2026, the center served 96 new clients, 36 of whom were pregnant.

Across the country, pregnancy resource centers are seeing fewer and fewer women who view their pregnancies as problematic. Part of the reason for this sharp decline in client traffic could be the nearly universal access to abortion pills, often ordered online, and sometimes without any prescription or doctor visit. Some of these sources are located overseas and nearly all will ship pills to states in which abortion is at least to some degree unlawful. Many of these pregnant women are disinterested in receiving help getting through an unwanted pregnancy. They want help getting out of an unwanted pregnancy and abortion pills seem to offer that help, quickly and quietly.

Dr. George Delgado addressed the New Life Care Center audience with an explanation of the mechanisms by which abortion pills operate. He also detailed the process he has pioneered to reverse those mechanisms. He is successful 64%-68% of the time if supplemental progesterone is administered soon after the first of the two required abortion pills have been taken. (Abortionpillreversal.com)

Gregg Cunningham presented embryonic and fetal endoscopy video to a crowd of nearly 500 at a Pregnancy Resource Center banquet in Georgia. Many downloaded the See Baby Grow app and immediately began to share content on social media.

That first pill in the medicinal abortion process contains a drug called mifepristone which blocks a naturally-occurring hormone named progesterone. Progesterone is necessary to sustain pregnancy. The second pill is misoprostol which induces severe cramping that expels the baby, usually down the toilet and into the sewer. Women who skip the mifepristone pill are risking the expulsion of their baby while it is still alive. Women who take abortion pills are often feeding their babies to the sewer rats, dead or alive.

Dr. Delgado's life-saving protocol is obviously only possible when a pregnant mother can be convinced that even early in pregnancy her baby really is a baby, not a mere "blob of tissue." That is a challenge because the IPSOS public opinion research organization reports that three-out-of-four Americans are unable to correctly answer most questions related to embryonic and fetal development. That may be why some two-thirds of Americans support first-trimester abortion, the pregnancy stage during which 90% of abortions occur.

More than 60% of America's one million plus annual abortions are now induced by pills which are taken by women

Canadian CBR Reports Two Babies Saved!

"Thank you to those people standing out there in the heat, holding that sign. Because for me, it changed the direction of my life, my decisions and [for] my unborn baby."

This beautiful message was left on Canadian CBR (CCBR's) voicemail in July. The caller was 8-weeks pregnant and she had an abortion scheduled. Thankfully, a CCBR outreach team was in Toronto, and this pregnant woman saw a preborn baby photo for first time. She looked at the photo for a while and made the decision right then to cancel her appointment. The CCBR staff connected with her, and she encouraged them further with this message: "Thank you so much because you just never know who you could affect. If you could pass this message on to the young girl and guy, I just want to say: 'Thank you so much from the bottom of my heart.'"

New CBR-Sweden Chapter in Lapland

You may need to look up Lapland on a map, but we are pleased to announce that CBR Sweden worked with Laplanders to start a CBR-Sweden chapter in Lapland, and also a Christian Values Party chapter. CBR-Sweden Director Mats Selander was with the CBR-Sweden/Lapland folks as they conducted the first CBR photo display in very cold conditions, measuring in negative Celsius temperatures. Lapland lies above the Arctic Circle where temperatures frequently drop below -20 Fahrenheit.

Mr. Selander reports that a revival movement is underway in Lapland. Their families are large and pro-life. He informed us: "The women are quiet, but they are 'lionesses' when defending life."

The Christian Values Party is the only pro-life party in Sweden, and it is gaining momentum. CBR-Sweden continues weekly displays in Stockholm, and a CBR volunteer regularly produces TikTok videos. The videos show young people debating with Mr. Selander, and the camera periodically pans over to an abortion photo sign. Some of CBR-Sweden's videos have one or two million views. We believe many lives will be spared from abortion as young people see and hear the truth on TikTok - of all places.

A second baby was saved by the CCBR team in Calgary. A CCBR intern shared that someone came up and shook her hand while she was holding a CBR abortion photo sign, and thanked her for the work the CCBR team is doing. They explained that they had a nine-month-old daughter when they found out they were pregnant with their second child. Fear set in as they believed they didn't have money to support two children, so they were considering having an abortion. But then they saw the photo signs, talked with the interns, they decided not to have an abortion! The September 2026 CCBR E-newsletter contains this testimony and the news that mother and baby are well at four months of pregnancy.

Our pictures save lives by proving just how infant-like a baby is from the earliest stages of pregnancy - even before most mothers know they are pregnant.

These preschool children were delighted to see the babies on the Psalm 139 display at Eden Chapel in Knoxville, Tennessee, in August. Their Sunday school teacher took class time to bring out the children so they now know the truth about God's creation in the womb.

Capital Campaign

Consider helping CBR reach our Capital Campaign goal of \$250,000 to purchase a second prenatal science exhibit of 20 of our seven-foot column signs with award-winning content plus 20 A-frame signs. The A-frames display Scripture related to prenatal development when exhibited in a Christian setting, or public health information when staged in a secular venue. Campaign funds will also purchase two Ford Transit trucks to transport the exhibit. As of this writing, donors have given a total of \$52,990. The builder expects to have the entire 20-column set built by November. Pray for all the supplies to arrive and for protection on him and his family.

“Preborn Baby Really is a Baby” (continued from page 1)

who have been lied to and thereby misperceive their baby to be little more than a microscopic “clump of cells”. Prenatal education can improve that statistic and the most effective means by which to achieve that objective is to persuade the public to download the *See Baby Grow* app, the award-winning educational app which offers a pregnancy tracker that uses prenatal endoscopic medical scans (not animations easily dismissed as anti-abortion propaganda) to make the baby real to its mother. The app allows users to post embryonic and fetal video clips on all major social media platforms. These same videos, of real babies, alive in their mothers’ wombs, can also be seen even more impressively on a computer screen by visiting the website www.ERF.science.

Psalm 105:1-5 commands us to “Give thanks to the Lord ... make known among the nations what He has done. ... [T]ell of all His wonderful acts Remember the wonders He has done, His miracles”

Which of Gods “acts” is more “wonderful” and “miraculous” than a baby created in His image? And now God has given us the technology required to “make known” this “miracle,” and make it known “among the nations.” So please help us to make it known!

When Mr. Cunningham encouraged banquet attendees to download the *See Baby Grow* app, the music which automatically plays the first time the app is opened could be heard all around the banquet hall!

**We thank you for your support
of CBR, and for God who knows
even when the animals give birth.**

“Do you know the time the mountain goats give birth?

Do you observe the calving of the deer?

“Can you count the months they fulfill,

Or do you know the time they give birth?”

GOD speaks in JOB 39:1-2

Prayer Requests

- Reach our Capital Campaign goal
- Pastors and priests to preach against abortion
- Blessings and provision for our international affiliates

Billions of Pieces of DNA From an Aborted Baby Cell Line Are in Every Vial of the MMR-II Vaccine

Health and Human Services (HHS) Secretary Robert F. Kennedy Jr. took to task Pennsylvania Democratic Governor Josh Shapiro for denying religious exemptions to vaccines, and for telling Mr. Kennedy: “There is no fetal tissue in the MMR.” Kennedy confirmed that aborted babies’ tissue was used in the creation of the measles, mumps, and rubella (MMR) vaccine.

Read Secretary Kennedy’s August 25 X post on the matter as he recounted the exchange [<https://bit.ly/4k69rNW>], including the fact that on a telephone call, Secretary Kennedy informed Gov. Shapiro that: “Some Americans had religious objections to the MMR vaccine because it contained fetal tissue.” Secretary Kennedy provided a shocking clip from a videotaped deposition of Dr. Stanley Plotkin, atheist and

inventor of the MMR vaccine. The deposition was conducted by attorney Aaron Siri in 2018. <https://bit.ly/4yPzsVP>

LifeSiteNews reported: “Plotkin admitted to ‘butchering’ 76 aborted babies – all of whom were over three months old – ‘in just one of the many studies that led to the development of his vaccine,’ the HHS secretary said. Kennedy further noted that “approximately 646 billion pieces” of DNA from an aborted baby cell line are in every vial of the MMR-II vaccine.” Plotkin gave testimony that he used aborted babies’ tissue (including lung, pituitary gland, heart, spleen, kidney, and skin) in the development of vaccines, and he admitted this aborted tissue is part of the ingredients of vaccines. <https://bit.ly/4zzl3xw>

Pray for his soul as Plotkin is now 94-years-old.

CENTER FOR BIO-ETHICAL REFORM

October 2026

Many Pregnancy Resource Centers have seen a sharp decline in clients due to easy availability of the abortion pill. Aloha Pregnancy Care & Counseling Center in Hawaii has found a way to continue to educate the public, including women facing crisis pregnancies. Director Steve Holck has placed three

7-foot banners with preborn baby developmental photos (ages one week through nine months) in their three large glass windows. Many people visit an eatery next door, and they are looking at the photos. In a medical building across the street, abortions are being done, and Mr. Holck sees the nurses looking at the banners. Some people are taking photos, and may be posting them on social media. Praise God!
